

## BILATERAL MEETINGS

Friday 11:00 - 13:00

**DESCRIPTION** Edutainment, be entertained and get educated along the way. e<sup>2</sup> Young Engineers enrichment programs employ our exclusive “edutainment” (education and entertainment) approach to teaching. We believe in making knowledge in the fields of math, science and technology accessible to all children through lessons that are enjoyable. e<sup>2</sup> Young Engineers has developed a selection of different programs in order to teach the subjects we feel are the way of the future. Our enrichment programs and workshops are suited for students of all different learning abilities. Unlike traditional lecture style education methods, our instructors engage students through the use of stories, hands-on experiments and demonstrations. Our participants learn real life applications of mathematic principles, the laws of physics and both mechanical and software engineering. Our enrichment programs are so successful because we have disguised the education with entertainment.

**CITY** Skopje, bul. Ilinden 107/59 [Google map](#)

**Offer & Request**

# WE ARE OFFERING OUR EDUTAINMENT PROGRAMS

Young Engineers Programs are based on a holistic educational approach made to engage and develop thoughts, feelings, and experiences. By using the complete Young Engineers Program for primary schools, children will have the extensive and inter- disciplinary understanding necessary for the 21st century. This is achieved by laying the following foundations involving playing and learning by doing
